Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 3-13 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blann et al. (5,967,176) (hereinafter Blann).

Blann teaches an apparatus for monitoring the fluid flow comprising a valve housing (12), valve (54) and electronics to determine the flow. The valve means can be retrofitted to the existing piping. Differential pressure means (57, 58) for measuring the pressures across the restriction. Blann teaches all the features of the instant invention except for the structure related to the positioning of the pressure ports and the removable plugs or the means for providing information relating to the optimal placement for the differential pressure measurement across the valve housing or means adapted to provide current position of the valve. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the ports with plugs since plugs would be required in case the pressure measuring means are to be removed from the valve means. Furthermore, one would require information on positioning the ports since without a proper placement of the ports, there would not be accurate measurement possible. Thus to achieve better results one having ordinary skill in the art would require information on where to locate the pressure measuring ports.

Response to Arguments

3. Applicant's arguments filed 3/3/05 have been fully considered but they are not persuasive. Applicant argues that the reference does not teach the means for providing information on optimal placement of the ports or means to provide current position of the valve. The examiner acknowledges that Blann does not explicitly teach such, however, one having ordinary skill in the art would recognize that it is necessary to have information relating toe the placement of the ports surrounding the valve since without these information one may nor achieve reliable results. Furthermore, applicant has not described what the means are to perform all these functions. Thus it would be an inherent limitation that would be required to fulfill the needs to produce such a device to be used with a flow meter.

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2855

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harshad Patel whose telephone number is (571) 272-2187. The examiner can normally be reached on Monday-Thursday (7:00 AM-5:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
